ABSTRACT

This document presents a summary of the characteristics of applicants and participants (teaching load, number of times applied for NSF support, geographic distribution, major educational assignment, subject matter responsibility, level of assignment, and name of school where employed) in National Science Foundation (NSF) funded institutes and research participation projects for science, mathematics, and engineering teachers throughout the United States. Data are included for the summer of 1960 and the 1960-61 school year. (SL)

FOREWORD

The National Science Foundation Institute programs are designed to make it possible for in-service teachers in elementary schools, secondary schools, and colleges to obtain additional instruction and become acquainted with new developments in science and mathematics. The Foundation supports the following programs:

1. Summer Institutes for high school and college teachers of science, mathematics, and engineering; for technical institute personnel; for elementary school supervisors and teachers; and Summer Conferences for college teachers.

Summer Institutes for the supplemental training of high school and college teachers of science, mathematics, and engineering have been conducted annually since the Summer of 1953. A pilot program for elementary school supervisors and teachers was initiated in 1959 through support of 12 Summer Institutes and was continued at about the same level of support in 1960. These institutes are comparable to the summer institutes for high school teachers in most respects, differing from the latter only in that they are designed to meet the specific needs of elementary school personnel.

2. Academic Year Institutes for high school teachers of science and mathematics, conducted through the entire academic year of full-time study at colleges and universities.

Academic Year Institutes have been supported by the Foundation since the Academic Year 1956-57 at colleges and universities which have offered a program of specially-designed, year-long courses of study for high school teachers of science and mathematics. The program was modified in 1959-60 to include a small number of college teachers with teacher-training responsibilities. The courses in the Academic Year Institutes are based on the subject matter of science and mathematics. Participating high school teachers are able in many instances to earn a graduate degree at the master's level. In a number of cases, to assist further in making it possible to complete work for the degree, the Foundation has enabled the institutes to offer summer awards which permit continuation of studies during the summer following the Academic Year Institute.

3. In-Service Institutes for high school teachers of science and mathematics, and for elementary school supervisors and teachers.

The Foundation provides support for Summer Institutes on the basis of proposals submitted by colleges and universities outlining the work that will be offered. Foundation funds may be used to pay the principal management and instructional costs, and provide stipends and travel and dependency allowance for teacher-participants. Institutions receiving grants are responsible for the administration of the Institute program, including selection of faculty and teacher-participants, payment of stipends, planning and conducting courses, seminars, activities, etc.

The number of teacher-participants and the duration of Summer Institutes vary considerably, the average being 50 participants and seven weeks' duration.

An Institute may constitute its offerings in a single field (for example, biology) or offer work in several areas (for example, chemistry, physics, and mathematics). Graduate credit is frequently available to those successfully completing the work.

These Institutes are characterized by offering subject matter courses especially designed for the teachers who attend and by being organized to give ample opportunity for informal contacts outside the classroom among the participants and staff.

During the Fiscal Year ending June 30, 1960, the Foundation supported 649 Institute programs. Of these, 412 were Summer Institutes (including 16 shorter Summer Conferences for college teachers), 33 Academic Year Institutes, and 204 In-Service Institutes. Over 31,000 teachers received financial assistance which enabled them to pursue further study in the fields of science and mathematics.

This report presents a summary and analysis of Applicant Record Cards submitted for two Summer Institute programs and an Academic Year Institute program, namely:

1. 1960 Summer Institutes for High School and College Teachers of Science and Mathematics and Engineering.
2. Academic Year Institutes for High School Teachers in Science and Mathematics.
3. Summer Institutes for Elementary School Supervisors and Teachers.

Applicant Record Cards were sent to the Foundation by all 352 Institutes in the Summer Institute Program for High School and College Teachers of Science and Mathematics and Engineering.

Of the 33 Academic Year Institutes, all submitted Applicant Record Cards except the University of South Dakota and the University of Oregon.

Thirteen of the 15 Institutes for Elementary School Personnel submitted cards, the exceptions being the University of Kansas and De Pauw University.

INTRODUCTION

This report summarizes the characteristics and distribution of applicants for three programs administered by the National Science Foundation for special advanced training of school teachers throughout the United States. The report is divided into three sections as follows:

- Section 1. Applicants to the National Science Foundation Summer Institutes for High School and College Teachers in 1960.
- Section 2. Applicants to the National Science Foundation Academic Year Institutes for High School and College Teachers 1960--61.
- Section 3. Applicants to the National Science Foundation Summer Institutes for Elementary School Personnel in 1960.

Applicant Record Cards were submitted for each applicant by the Institute to which the applicant applied. Data from these Applicant Record Cards were punched into IBM punch cards as follows: an assigned serial number, the code number for the school and the institute, two initials and last name of the applicant, type of school in which applicant teaches, total number of periods taught each week (a) in mathematics (b) in science, normal teaching load in that school, indication as to whether applicant is department head in mathematics or science or equivalent, subjects taught (mathematics, grades 7-8; mathematics, grades 9-12; biology, chemistry, earth science, general science, physics, and specific other), major field of interest. Applicant Record Cards are reproduced in each section.

The punch cards were then processed to produce listings and tabulations by institute, by applicant, by area, etc. Percentages, ratios, and averages were computed on an electronic computer.

The tables herein reflect these data as submitted to the National Science Foundation, and all data have been utilized to the fullest extent possible. Errors and omissions by applicants in filling out applications have caused minor differences in the totals obtained for the various statistical breakdowns. These differences are insignificant and reflect the inattention of applicants to specific instructions, and in some cases illegibility of handwriting.

The table below indicates the relative magnitudes of the three programs.

INSTITUTES	TOTAL APPLICANT RECORD CARDS	TOTAL NUMBER OF APPLICANTS	AVERAGE NUMBER OF APPLICATIONS PER APPLICANT
Summer HS and College Teachers	148,187	46,106	3.2
Academic HS and College Teachers	14,112	5,519	2.6
Summer Elementary Personnel	7,215	3,911	1.8

Some comparisons of the characteristics of the registrations and the applicants under these three programs are presented in the page entitled "Summary of Data Submitted by the Applicants to the Three National Science Foundation Institute Programs."

(U. S. Only)

- 4 - 7

APPLICANTS TO ACADEMIC YEAR INSTITUTES WHO ALSO
APPLIED TO SUMMER INSTITUTES

Slightly more than half of the applicants to the Academic Year Institutes had already applied to the Summer Institutes for high school and college teachers. Of the 5,519 applicants to Academic Year Institutes, 2,782 had applied to Summer Institutes (50.4 percent).

However, this number was equivalent to being only six percent of the 46,106 applicants to Summer Institutes.

Comparison of applicants to Summer Institutes and to Academic Year Institutes was made by IBM machine by matching the applicant's name and state in which he was teaching.

Of the 2,782 such applicants, 1,248 submitted only one application each to Academic Year Institutes, 460 submitted two applications each, 316 submitted three applications each, 216 submitted four applications, 152 submitted five applications each. The remaining 390 submitted more than five applications each. The distribution of these applicants is shown in the accompanying table which presents the number of applicants according to number of applications submitted.

Of the 2,782 applicants, 769 had submitted only one application each to Summer Institutes, 405 submitted two applications each, 327 three each, 252 four each, 214 five applications each, and the remaining 815 submitted more than five applications each.

The largest numbers of submissions to the 31 Academic Year Institutes reporting were by three individuals, one with 28 applications, another 27, and the third 24. The first also submitted 26 applications to Summer Institutes, the second submitted 11, and the third 10.

The largest number of submissions by individuals to Summer Institutes were as follows: 73 by one individual, 66, 50, 48, 46: two persons submitted 41 applications each. The two individuals who submitted 73 and 66 applications, respectively, to Summer Institutes also submitted two applications each to Academic Year Institutes. The one with 50 submitted only one to Academic Year, the 48 (four applications to Academic Year), the 46 (16), 41 (22), 41 (1).

Thirty-three applicants submitted more than 10 applications each to Institutes in both programs.

Highest submissions of applications to both Institutes were submitted by four individuals as follows: 13 applications to Academic Year Institutes and 50 to Summer Institutes; 16 to Academic Year and 46 to Summer; 17 to Academic Year and 35 to Summer, 22 to Academic Year and 41 to Summer.

DISTRIBUTION OF APPLICANTS WHO SUBMITTED APPLICATIONS

TO BOTH SUMMER AND ACADEMIC YEAR INSTITUTES

No. of Times to Summer Institute	No. of Times Applicant Applied to Academic Year Institutes										Over 10	Total

 - By State (4 pages)
 - By Major City (2 pages)
- 1G Distribution of Applicants By Institution and Institute
- By Subjects Taught and Fields of Interest (10 pages)
 - Percentage Distribution (10 pages)

**PROCESSING APPLICANT RECORD CARDS FOR SUMMER INSTITUTES
FOR COLLEGE AND SECONDARY TEACHERS**

Applicant Record Cards were submitted to NSF by the Institutes as NSF Form 9C-25B shown below, with data entered by the applicant or checked as required.

Some applicants neglected to enter all the information or to check boxes as required; applicants who were teaching more than one subject or had more than one major field of interest checked more than one item. A few applicants misunderstood the request for total number of periods taught each week, entering "40" which indicated they thought they were on a forty-hour week.

However, the number of all such entries and errors and omissions was relatively small (less than one percent). All cards submitted were used during the statistical processing.

A six-digit number, assigned mechanically to each Applicant Record Card for reference, and the standard code for each Institution and Institute, and all data were then punched into IBM cards in the format below:

Serial Number	Cols. 1-6	No. of Periods Taught Per Week-Math	Cols. 32-33
Initials	7-8	No. of Periods Taught Per Week-Science	34-35
Last Name	9-18	Normal Teaching Load (Periods Per Week)	36-37
Type of School in which		Head of Math or Science Department	38
Applicant Teaches	24	Subjects Taught (Eight Separate Subjects)	39-46
Major City Code	25-26	Subjects of Interest (Multiple-Punched)	47
State Abbreviation	27-31	Institution Number	50-53
		Institute Letter	54

All cards were verified by machine to insure accuracy of the data. Whenever an item was left blank by the applicant, the corresponding columns in the punch card were left blank.

After all punching and verifying was completed, all Applicant Record Cards were listed in numerical sequence for reference and checking purposes, and a similar listing of all data was made in alphabetic sequence of applicant's last name, and within last name, by initials and state. During the latter operation a summary card was cut for each applicant, containing all information concerning that individual and the number of times he submitted applications to the respective Institutes.

The individual detail cards and the summary cards were then used to produce tabulations on conventional IBM equipment. All percentages, and ratios of applications to applicants, were computed on an IBM electronic computer.

The resulting summary cards were then listed on multilith masters for reproduction as tables in this publication.

SECTION 1

APPLICANTS TO THE NATIONAL SCIENCE FOUNDATION SUMMER INSTITUTES FOR HIGH SCHOOL AND COLLEGE TEACHERS IN 1960

Directors of all Institutes in this program turned in Applicant Record Cards.

A total of 46,106 applicants applied for approximately 21,000 stipends in the 1960 NSF Summer Institutes for high school and college teachers. They submitted 148,187 applications, the average number being 3.2 applications per person. The number of applications submitted by individual teachers ranged from 1 per person to a high of 73 applications for one individual.

Over 500 teachers submitted more than 17 applications each.

Approximately 39 percent of the applicants were heads of Mathematics or Science Departments.

High school teachers constituted 88.5 percent of all applicants to Summer Institutes.

About 5.4 percent of all applicants were college teachers, 2.2 percent junior college teachers, 2.6 percent elementary school teachers, and 1.3 percent other schools. The latter included academies, combination and cooperative schools, technical schools, vocational schools, trade schools, community schools, and others not classified to the four major categories.

DISTRIBUTION BY REGIONS AND STATES

The breakdown of applicants and applications by the four regions of the United States showed that 22.9 percent of the applicants were in the Northeastern Region, 28.5 percent in the North Central Region, 33.3 percent in the South and 15.4 percent in the West.

However, applicants in the Northeast submitted 3.6 applications per teacher as against 3.5 in the North Central Region, 2.8 in the South, and 3.3 in the West.

High school teachers in the United States submitted an average of 3.4 applications each as compared to the over-all teacher average of 3.2.

High school teachers in the Northeast Region submitted 3.8 applications each as against 3.6 in the North Central Region, 2.9 in the South, and 3.4 in the West.

On a state-to-state basis the average number of applications per teacher ranged from lows of 1.2 per teacher in Hawaii and 1.6 in Alaska to a high of 4.1 in Arizona. All other states averaged less than 4 per teacher.

In every case the number of applications by high school teachers exceeded the average for all teachers.

The Middle Atlantic States were consistently high in the number of applications per teacher: 3.8 for New York, 3.6 for New Jersey, and 3.6 for Pennsylvania. For high school teachers in these states the averages were 4.0 for New York and 3.8 each for New Jersey and Pennsylvania.

The States of Arizona, Iowa, New York, and Nevada were the only ones in which the high school teachers averaged four or more applications per person.

Tables 1 A present the detailed data on applications and applicants by teaching assignment, by Region, by Census Division, by State. Succeeding tables also identified as 1 A present the average number of applications per teacher for the Regions, Census Divisions, and States.

DISTRIBUTION BY MAJOR CITY

Of the total number of applicants, only 9 percent were teaching in the 20 major cities of the United States having population over 500,000 each. Since these 20 cities have a total population of almost 28 million (about 16 percent of the nation's total population), this indicates that applications are coming from other areas in greater proportions than from major cities.

Considering only the 20 major cities (each with population over 500,000), New York City had 1,089 applicants to the Summer Institutes which constituted more than one-fourth of all applicants from major cities.

For the 20 cities, the average number of applications per teacher was 3.4 which was slightly higher than the over-all average of 3.2.

Philadelphia had the highest average (4.3) with New York City second at 4.0.

In nearly every major city the average of applications per person was higher for high school teachers than the average for all teachers.

Of New York City's applicants, 24 percent were department heads who made 3.6 applications each while the 76 percent were others who made 4.2 applications each.

Philadelphia had the highest application rate for major cities (4.3 for each applicant), department heads recording 3.2 each while non-heads recorded 4.5 each.

The lowest major city application rate was in Cleveland (2.2) where department heads averaged 2.5 and all others averaged 2.2.

Tables 1 A present the actual data on applications and applicants for the major cities in the United States. These tables are accompanied by other 1 A tables which show the average number of applications per applicant.

HEADS OF MATHEMATICS OR SCIENCE DEPARTMENTS

Whenever the Code 1 appears in a table, it indicates heads of Mathematics or Science Departments. Code 2 indicates all others who are not department heads.

Approximately 98 percent of all applicants indicated on their applications whether they were heads of Mathematics or Science Departments. The remainder failed to indicate this characteristic on the application.

Of those responding to this item, about 39 percent of the applicants were heads of Mathematics or Science Departments and 61 percent were not. The average number of applications per department head was 3.3 against 3.2 for all others.

The Southern Region of the U. S. had 47 percent department heads as compared to 47 percent for the North Central Region and 35 percent for the West, while the Northeast had only 29 percent department heads.

However, the application rate for the Southern Region was only 2.9 applications per department head while for the Northeast Region the average was 3.5 applications per teacher. The North Central Region averaged 3.6 and the West 3.4.

Tables 1 S present the numerical distribution of applicants and applications by department heads and others, by Region, by Census Division, by State, and by teaching assignment.

Tables 1 S % present the percentage breakdowns of department heads and others, and the number of applications per teacher.

DISTRIBUTION BY SUBJECT TAUGHT

Exactly half of all applicants to Summer Institutes stated they were teaching mathematics. Of these mathematics teachers, four out of every seven indicated they were teaching mathematics only, while the remainder were teaching mathematics in combination with other subjects. The percentage breakdown of mathematics teachers follows:

Mathematics (Grades 9 to 12 only)	18.7 %
Mathematics (Grades 7 to 8 only)	4.5 %
Mathematics (Grades 7-8 and Grades 9-12 only)	5.3 %
Mathematics (Grades 9-12) and additional subjects	13.3 %
Mathematics (Grades 7-8) and additional subjects	6.1 %
Mathematics (Grades 7-8 and 9-12) and additional subjects	2.2 %
Total	50.0 %

Tables 1B and 1B % present the numbers and percentages of applicants by subject taught, by Region, by Census Division, by State, and by City. In Tables 1B % the sum of percentages for Math (7-8) and Math (9-12) exceeds the total above inasmuch as teachers of both Math 7-8 and Math 9-12 are counted twice, once in each category.

About 23 percent were biology teachers; 19 percent taught chemistry; 3 percent earth science; 32 percent general science; and 15 percent physics. The total of all percentages exceeds 100 because many applicants taught two or three subjects.

Approximately 4.9 percent of all applicants stated they were teaching subjects other than mathematics and science, while 3.1 percent did not indicate they were teaching (most of these were principals and supervisors without teaching assignments).

Teachers of other sciences were teaching two or more subjects in greater proportions than mathematics teachers, as indicated by the following breakdown: physics only, 1.6 percent; general science only, 8.7 percent; earth science only, 0.5 percent; chemistry only, 3.4 percent; biology only, 6.2 percent.

There were many combinations of subjects (non-mathematics) taught, the largest percentages being in the following combinations: biology and chemistry, 1.4 percent; biology, chemistry, and physics, 0.8; biology, chemistry, and general science, 1.4; biology and general science, 3.4; chemistry and physics, 1.7; chemistry and general science, 1.1; chemistry, general science, and physics, 0.9; physics and general science, 0.6.

The percentage of Department Heads who taught mathematics was slightly higher than that for all other teachers. About 34 percent of the department heads indicated they were teachers of general science as against 31 percent for all others. The other comparisons of department heads to others were: biology, 28 percent to 19 percent; chemistry, 30 percent to 12 percent; earth science 3 percent to 4 percent; physics, 23 percent to 9 percent.

DISTRIBUTION BY SUBJECT OF INTEREST

About 45 percent of all applicants stated they were interested in mathematics, while 25 percent were interested in biology, 19 percent in chemistry, 17 percent in general science, 17 percent in physics, and 9 percent in earth science. The total exceeds 100 because some applicants indicated two or three subjects of interest.

Considering the four regions of the United States, only the West exceeded the over-all average of 45 percent, recording an even 50 percent showing interest in mathematics.

Alaska had 62 percent of the applicants showing interest in mathematics, Delaware, 60 percent; New Mexico, 58 percent; and Nevada, 57 percent. The low was recorded by North Carolina (35 percent).

Of the major cities, Cleveland was high with 60 percent interested in mathematics. San Francisco had 59 percent.

The only states which showed more than half of the applicants interested in mathematics were: Vermont in the New England Census Division; Delaware in the South Atlantic Division; Oklahoma in the West South Central Division; Montana, New Mexico, Utah, and Nevada in the Mountain Division; Oregon and California in the Pacific. Alaska had the highest percentage (62 percent), while Hawaii recorded 53 percent.

Among the 20 major cities, more than half the applicants showed an interest in mathematics in Detroit, Cleveland, San Francisco, and Seattle.

Tables 1 C indicate the distribution of applicants by field of interest, by Region, by Census Division, by State, and by city. An additional table shows the city breakdown by department heads and others.

Tables 1C % show the proportion of applicants indicating fields of interest being mathematics, biology, chemistry, earth science, general science, physics.

DISTRIBUTION BY NUMBER OF APPLICATIONS SUBMITTED

The punch cards representing each application by an applicant to a Summer Institute were sorted by individual name to determine the number of applications submitted by each individual. A majority of the applicants submitted only one application each, but there were 506 applicants who submitted over 17 applications each.

These data were summarized by the number of applications submitted and by type of school in which the individual was teaching.

The summaries are presented as Tables 1D which show the distribution by state, by school, and by the number of applications submitted by an applicant.

Tables 1D % present the percentages of applicants submitting the indicated number of applications each.

Where there are sufficient data to determine an adequate distribution, the mathematical function represented by this distribution is the Poisson distribution. For example, for California high school teachers, 41 percent submitted one application each, 14 percent two applications each, 10 percent three applications, 8 percent four applications, 6 percent five applications, 4 percent six applications, 4 percent seven applications, 2 percent eight applications, 2 percent nine applications, etc.

Considering New York high school applicants, the distribution was: 40 percent submitted one application each, 13 percent submitted two applications, 11 percent submitted three applications each, 8 percent four applications, 6 percent five applications, 5 percent six applications, 3 percent seven applications, 3 percent eight applications, 2 percent nine applications, etc.

This distribution is characteristic of the submissions by all high school teachers.

AVERAGE PERIODS TAUGHT VERSUS NORMAL TEACHING LOAD

Data collected concerning the number of periods per week each teacher was teaching in mathematics and in science, as well as the normal teaching load in that school, were accumulated. In most cases a period represented an hour or 50 minutes. However, data submitted by a few applicants apparently did not reflect that type of unit.

Normal teaching load is considered to be the number of hours taught per week by most teachers in the school in which the applicant taught.

Averages were computed for all applicants by the respective breakdowns, U. S. Regions, Census Divisions, States, Cities, and type of school in which the applicant taught.

Tables 1E present the actual data while Tables 1E A present the averages to the nearest whole number of periods taught.

The summary table below presents the over-all averages in numbers of periods taught:

	Mathematics	Science	Normal Teaching Load
College Teachers	3.1	10.4	13.5
Jr. College Teachers	5.9	11.2	16.7
High School Teachers	10.1	12.0	25.0
Elementary Teachers	6.9	8.0	25.2
Other Teachers	10.6	8.7	22.6

The sum of the periods taught in mathematics and science for college teachers is approximately equal to the normal college teaching load. This is true because the college teachers usually teach mathematics and science courses but no other courses.

In high schools, elementary schools, and other schools, teachers who have classes in mathematics and sciences also have classes in other subjects. For that reason the sum of the periods taught in mathematics and science is less than the normal teaching load.

There is a remarkable consistency in the data for college teachers, with the exception of data for those states in which the number of applications was relatively low. In the latter cases a few entries influence the average significantly.

For high schools, there is a remarkable stability in the data for the individual states as to the normal teaching load. The range is from a low of 22 periods per week averaged for North Dakota and South Dakota to a high of 27 periods per week for Ohio, Utah, and Hawaii. The over-all average was 25.0 periods normal teaching load.

Although the average normal teaching load for all elementary school teachers was 25.2 periods per week, the range is much greater than that for high school teachers, running from a low of 18 for Florida teachers to high averages of 50 in North Dakota (only 1 application) 42 in New Hampshire (4 applications), and 38 in Utah (3 applications).

There is no significant difference in the teaching loads and normal teaching loads for teachers in the major cities. Where there appear to be some differences from city to city, the differences are due primarily to the small number of teachers who applied from those particular cities.

Tables 1E and 1E A present these data for the 20 major cities.

DISTRIBUTION OF APPLICANTS BY INSTITUTION AND INSTITUTE

All of the data submitted by applicants to Summer Institutes were tabulated by individual institutions and institutes to show the total number of applications received, the distribution of applicants by subjects taught and by field of interest.

These data were then processed to compute the percentages of the applicants who taught the respective subjects and who showed an interest in the respective subjects.

The individual institutions and institutes are listed in the order of code number which has been assigned to them, starting from the State of Maine and proceeding by state along the East Coast and then to the West.

Since many institutes are set up by subject matter, an examination of the Tables 1F and 1F % indicates the major proportion of applicants to the Institute.

For example, the B Institute at Bowdoin College in Maine shows that 91 percent of the applicants taught mathematics in the grades 9 to 12, 9 percent taught mathematics in grades 7 to 8, and 94 percent of all applicants were interested in mathematics. This indicates that the Institute was devoted to mathematical subjects.

SECTION 2

APPLICANTS TO ACADEMIC YEAR INSTITUTES FOR HIGH SCHOOL AND COLLEGE TEACHERS 1960-1961

LIST OF TABLES

2 A Number of Applications and Applicants (Also Applications Per Applicant) by Teaching Assignment

By Region, By Census Division, By State (Regionally)	(6 pages)
By State (Alphabetically)	(2 pages)
By Major City	(2 pages)
By State and By Heads of Departments	(4 pages)
By City and By Heads of Departments	(2 pages)

2 B Comparisons of Application By Heads of Math or Science Departments and Others (Also Percentages and Ratios)

By Region, By Census Division, By State	(4 pages)
By Major City	(2 pages)

2 C Applicants By Subject Taught (Also Percentages)

By Region, By Census Division, By State	(6 pages)
By State and By Heads of Departments	(4 pages)
By City and By Heads of Departments	(2 pages)

2 D Applicants By Field of Interest (Also Percentages)

By Region, By Census Division, By State	(6 pages)
By City	(2 pages)
By City and Heads of Department	(4 pages)

2 E Frequency Distribution of Applicants and by Number of Times Applicant Applied

By State and By Type of School	(7 pages)
Percentage Distribution	(7 pages)

2 F Teaching Load and Averages of Applicants (Math, Science, and Normal in Periods Per Week) By Type of School

By Region, By Census Division, By State	(6 pages)
By State	(4 pages)
By Major City	(2 pages)

2 G Distribution of Applicants By Institution and Institute

By Subjects Taught and Fields of Interest	(1 page)
Percentage Distribution	(1 page)

PROCESSING APPLICANT RECORD CARDS FOR ACADEMIC YEAR
INSTITUTES FOR SECONDARY TEACHERS

Applicant Record Cards were submitted to NSF by the Institutes as NSF Form 9C-25A as shown below, with data entered by the applicant or checked as required. All cards submitted were used during data processing.

Some applicants neglected to enter all the information or to check boxes as required; some misunderstood the request for total number of periods taught each week, entering "40" which indicated they thought they were on a forty-hour week. However, the number of all such entries and errors and omissions was relatively small (less than one percent).

Many teachers at academies, consolidated schools, technical schools, etc. checked "other" as the type of school. As a result, the percentage of applicant's in "other" schools is higher than it should be.

A six-digit serial number, assigned mechanically to each Applicant Record Card for reference, and the standard code for each Institution and Institute, and all data were then punched into IBM cards in the format below:

Serial Number	Cols. 1-6	No. of Periods Taught Per Week-Math	Cols. 32-33
Initials	7-8	No. of Periods Taught Per Week-Science	34-35
Last Name	9-18	Normal Teaching Load (Periods Per Week)	36-37
Type of School in which		Head of Math or Science Department	38
Applicant Teaches	24	Subjects Taught (Eight Separate Subjects)	39-46
Major City Code	25-26	Institution Number	50-53
State Abbreviation	27-31	Institute Letter	54

All cards were verified by machine to insure accuracy of the data. Whenever an item was left blank by the applicant, the corresponding columns in the punch card were left blank.

After all punching and verifying was completed, all Applicant Record Cards were listed in numerical sequence for reference and checking purposes, and a similar listing of all data was made in alphabetic sequence of applicant's last name, and within last name, by initials and state. During the latter operation a summary card was cut for each applicant, containing all information concerning that individual and the number of times he submitted applications to the respective Institutes.

The individual detail cards and the summary cards were then used to produce tabulations on conventional IBM equipment. All percentages, and ratios of applications to applicants, were computed on an IBM electronic computer.

The resulting summary cards were then listed on multilith masters for reproduction as tables in this publication.

NATIONAL SCIENCE FOUNDATION				NSF Form 9C-25A	
1960 ACADEMIC YEAR INSTITUTE				YOUR COMPLETE NAME _____	
APPLICANT RECORD CARD				APPLICATION MADE TO _____	
INSTRUCTIONS TO THE APPLICANT: THIS CARD MUST ACCOMPANY EVERY APPLICATION FOR A STIPEND AT AN INSTITUTE SPONSORED BY THE NATIONAL SCIENCE FOUNDATION. IT MUST BE SENT TO THE INSTITUTE DIRECTOR. SECTION 2

APPLICANTS TO THE NATIONAL SCIENCE FOUNDATION ACADEMIC YEAR

INSTITUTES FOR HIGH SCHOOL AND COLLEGE TEACHERS 1960-61

Thirty-one of the 33 Institutes in this program sent Applicant Record Cards to the National Science Foundation.

Oregon State College and the University of South Dakota did not submit the cards for applicants to Institutes conducted during the Academic Year. For that reason, data for these two Institutes are not reflected in any of the tables or in the Summary Table 2F which summarizes the applicants and applications at each Institute.

A total of 5,519 teachers submitted applications to the 31 reporting Academic Year Institutes. Of these, 81.7 percent were high school teachers, 1.7 percent college teachers, 1.0 percent junior college teachers, 1.1 percent elementary school teachers, and the remainder not classified in the four major categories. The latter included consolidated schools, technical schools, combination schools, laboratory schools, and others, as well as all persons who did not fully describe their schools or neglected to fill in the data.

When the "others" were not considered, the breakdown of applicants was: high school teachers 95.5 percent; college teachers 2.0 percent; junior college teachers 1.2 percent; elementary 1.3 percent.

For the entire country the application rate was 2.6 applications per applicant. This average was considerably lower than the 3.2 average number of applications per person applying to the Summer Institutes. As in the case of Summer Institutes, high school teachers submitted more applications per person (2.7) than the over-all average.

Of all applicants, 41 percent were heads of Mathematics or Science Departments and 59 percent were others. This proportion was slightly higher than that for the applicants to the Summer Institutes (39 percent), but not significantly different.

DISTRIBUTION BY REGIONS AND STATES

The applicants in the United States were distributed by the four regions as follows: Northeast, 20.7 percent; North Central Region, 30.8 percent; South, 28.4 percent; West, 20.1 percent.

The applications-per-person rates were from a low of 2.4 in the South to 2.6 in the Northeast, 2.7 in the West, and 2.8 in the North Central Region.

The heavily-populated states of New York, California, and Pennsylvania had the highest number of applicants to Academic Year Institutes, in that order.

New Hampshire (3.8), Indiana (3.7), Vermont (3.6), and Arizona (3.5) had the highest number of applications per applicant. Rhode Island had the lowest average of the individual states (1.4 per teacher).

As a group, the three New England States of Maine, New Hampshire, and Vermont were unusually high in the average number of applications per teacher, 3.1 for Maine, 3.8 for New Hampshire, and 3.6 for Vermont. These were significantly higher than the 2.6 average for the entire United States.

The range for high school teachers only who constituted the major portion of the applicants was from 1.5 in Rhode Island and 1.6 in Georgia to 4.1 for Arizona and 4.0 in Vermont. The average for high school teachers in nearly every state was slightly higher than the average for all teachers in that state.

Tables 2A present the actual data on applications and applicants by Region, by Census Division, by State, and by teaching assignment. Additional 2A tables present the average number of applications per applicant.

DISTRIBUTION BY MAJOR CITY

Although the 20 major cities (population over 500,000 each) have 16 percent of the total U. S. population, less than 6 percent of applicants to the Academic Year Institutes were from the 20 major cities. This was considerably lower than the 9 percent recorded for Summer Institutes.

In the 20 major cities the number of applications per person was 2.2 as against 2.6 for the entire nation.

Considering only applicants in major cities, teachers in San Antonio averaged 3.4 applications each while those in New York City averaged 3.3. The lowest averages were recorded by Houston with 1.2 and Milwaukee with 1.4.

Tables 2A present the distribution of applications and applicants by major city. The averages (applications per applicant) are shown in accompanying tables.

DEPARTMENT HEADS

More than half of the applicants in the Southern Region were heads of Mathematics or Science Departments while in the Northeast Region only 28 percent of the applicants were department heads. The North Central Region had 46 percent department heads and the West had 41 percent. The average number of applications per applicant was 2.6 for department heads as compared to 2.5 for all others.

In New Hampshire, 59 percent of all applicants were department heads; Iowa, 60 percent; North Dakota, 70 percent; South Dakota, 64 percent; Nebraska, 65 percent; North Carolina, 72 percent; South Carolina, 65 percent; Mississippi, 79 percent; Arkansas, 64 percent.

Only 21 percent of the applicants from the 20 major cities were heads of Mathematics or Science Departments as compared to 41 percent for the nation. Department heads submitted 2.4 applications each, as against an average of 2.2 applications each for others.

More than half of the applicants from Pittsburgh were department heads, while Boston and Cleveland had no department heads applying to the Institutes. Los Angeles was second high with 43 percent department heads.

In San Antonio where teachers made 3.4 applications each, department heads averaged 6.3 each and others averaged 2.1 applications each.

DISTRIBUTION BY SUBJECT TAUGHT

Approximately 56 percent of all applicants stated they were teaching mathematics. Of these mathematics teachers, more than half were teaching mathematics only, the remainder teaching other courses in addition to mathematics. The percentages of all applicants who were teaching mathematics either alone or in combination with other subjects follow:

Mathematics	(Grades 9-12 only)	20.4 percent
Mathematics	(Grades 7-8 only)	4.4 percent
Mathematics	(Grades 7-8 and also Grades 9-12 only)	5.6 percent
Mathematics	(Grades 9-12) and additional subjects	16.7 percent
Mathematics	(Grades 7-8) and additional subjects	5.8 percent
Mathematics	(Grades 7-8 and 9-12) and additional subjects	3.7 percent
Total		56.4 percent

Tables 2B present the data by subject taught by Region, by Census Division, by State, and by City, and Tables 2B % are the corresponding percentage tables. In Tables 2B % the sum of percentages for Math 7-8 and Math 9-12 exceeds the total above because in the machine processing all applicants who taught both Math 7-8 and Math 9-12 were counted twice, once in each classification.

Of all applicants, 25 percent indicated they were teaching biology full-time or part-time, 20 percent chemistry, 3 percent earth science, 36 percent general science, and 18 percent physics. Most of the applicants were teaching more than one subject as indicated by the fact that less than one percent taught physics only, 8 percent general science only, less than one percent earth science only, 2 percent chemistry only, and 4.5 percent biology only. There were all types of combinations of subjects (non-mathematics) taught, the largest percentages being the following combinations: biology and chemistry, 1.3 percent; biology, chemistry, and physics, 1.2; biology, chemistry and general science, 1.9, biology and general science, 3.9; chemistry and physics, 1.3; chemistry and general science, 0.9; chemistry, general science and physics, 1.1; physics and general science, 0.5.

Two percent of all applicants indicated they were teaching subjects other than mathematics and science, while 3.1 percent did not indicate any subjects taught (many of these were principals and supervisors).

Heads of Mathematics or Science Departments reported teaching mathematics in approximately the same proportions as other teachers. However, in all other sciences the proportions for department heads were higher than for other teachers as follows: biology, 31 percent to 19 percent; chemistry, 32 to 11; earth science, 3 to 3; general science, 38 to 35; physics, 28 to 10.

DISTRIBUTION BY SUBJECTS OF INTEREST

Approximately 47 percent of the applicants to the Academic Year Institutes indicated an interest in mathematics. About 28 percent were interested in biology, 21 percent in chemistry, 5 percent in earth science, 17 percent in general science, and 17 percent in physics.

The total exceeds 100 percent because some applicants indicated interest in two or three subjects.

The Western Region of the United States reported 52 percent interested in mathematics while the Northeast showed 48 percent; South 46 percent; and North Central 45 percent.

The following states showed more than half the applicants interested in mathematics: Vermont, Massachusetts, and Connecticut in the New England States; New Jersey in the Middle Atlantic Division; Minnesota in the West North Central Division; Delaware and Maryland in the South Atlantic States; Louisiana, Oklahoma, and Texas in the West South Central Division; all Mountain States except Idaho; and Washington and California in the Pacific.

In the 20 major cities, 55 percent of the applicants were interested in mathematics. Chicago and Los Angeles showed over 77 percent of the applicants interested in mathematics. Boston showed 80 percent on a very small number of teachers.

Tables 2C show the distribution of applicants by Region, by Census Division, by State and City, and by field of interest.

Tables 2C % show the percentages of all applicants in the respective categories.

DISTRIBUTION BY NUMBER OF APPLICATIONS SUBMITTED

The data for each teacher submitting one or more applications were consolidated to obtain a distribution of applicants by the number of applications submitted and by the type of school.

Approximately 51 percent of the applicants submitted one application each, 16 percent submitted two each, 11 percent three each, 7 percent four each, 5 percent five each, 3 percent six each, 2 percent seven each.

About 3 percent of the applicants submitted 10 or more applications each to the 13 reporting Institutes.

As in the case of the number of applications submitted by applicants to the Summer Institutes, the distribution of high school teachers follows the Poisson distribution. For other teachers, there are not sufficient numbers of applications to present adequate distributions.

The distributions of applications by number of applications submitted are presented for the individual states in Tables 2D.

Tables 2D % show the percentage distributions to permit comparisons of the high school teachers applying from the individual states. Although the numbers of applicants are considerably less than those submitted to the Summer Institutes, the frequency distributions are remarkably similar.

Comparisons are presented below for California and for New York high school teachers.

PERCENTAGES SUBMITTING INDICATED NUMBER OF APPLICATIONS										
	1	2	3	4	5	6	7	8	9	10
California										
To Summer Institutes	41%	14%	10%	8%	6%	4%	4%	2%	2%	2%
To Academic Year	42%	20%	8%	7%	6%	4%	3%	2%	3%	1%
New York										
To Summer Institutes	40%	13%	11%	8%	6%	5%	3%	3%	2%	2%
To Academic Year	52%	13%	10%	7%	6%	3%	2%	1%	1%	1%

PERIODS TAUGHT IN MATHEMATICS AND SCIENCE VERSUS NORMAL TEACHING LOAD

Data submitted by applicants concerning the number of periods per week taught in mathematics and science and the normal teaching load at the school were added together and averaged for the respective categories.

A period is usually an hour or 50 minutes, but laboratory periods may be two or three or even four hours long.

The basic data showing the number of teachers and the sums of these periods as reported by these teachers are presented in Tables 2E.

The averages are presented in Tables 2E A to the nearest whole number of periods taught.

The summary below presents the average number of periods for all applicants:

	Mathematics	Science	Normal Teaching Load
College Teachers	8.0	7.3	14.7
Jr. College Teachers	10.0	10.5	18.4
High School Teachers	11.0	12.2	24.5
Elementary School Teachers	6.6	7.8	25.6
All Others	11.2	12.0	25.0

As in the case of teachers applying to the Summer Institutes, the sum of the periods taught in mathematics and science by college teachers and junior college teachers is approximately equal to the normal teaching load, probably because teachers of mathematics and science do not teach other subjects. On the other hand high school teachers, elementary teachers, and others are required to teach other courses besides mathematics and science. For that reason, the sum of the periods taught in mathematics and science does not equal the average normal teaching load in schools other than colleges.

The range of state averages of the normal teaching load for high school teachers is quite small, running from a low of 21 periods per week in the District of Columbia and South Dakota to a high of 29 periods per week in Delaware.

DISTRIBUTION BY INSTITUTION AND INSTITUTE

The summary of applicants applying to the respective institutes and institutions is presented in Tables 2F. In addition to indicating the total number of applicants, these tables present the distribution of applicants by subjects taught and by fields of interest.

Tables 2F % show the percentage distribution of these applicants at the respective institutions and institutes.

PROCESSING APPLICANT RECORD CARDS FOR SUMMER INSTITUTES FOR ELEMENTARY SCHOOL PERSONNEL

Applicant Record Cards were submitted to NSF by the Institutes as NSF Form 9C-25B shown below, with data entered by the applicant or checked as required. All cards submitted were used during data processing.

Some applicants neglected to enter all the information or to check boxes as required; some misunderstood the request for total number of periods taught each week, entering "40" which indicated they thought they were on a forty-hour week. However, the number of all such entries and errors and omissions was relatively small (less than one percent).

A six-digit serial number, assigned mechanically to each Applicant Record Card for reference, and the standard code for each Institution and Institute, and all data were then punched into IBM cards in the format below:

Serial Number	Cols. 1-6	No. of Periods Taught Per Week-Math	Cols. 32-33
Initials	7-8	No. of Periods Taught Per Week-Science	34-35
Last Name	9-18	Normal Teaching Load (Periods Per Week)	36-37
Type of School in which		Head of Math or Science Department	38
Applicant Teaches	24	Subjects Taught (Eight Separate Subjects)	39-46
Major City Code	25-26	Subjects of Interest (Multiple-Punched)	47
State Abbreviation	27-31	Institution Number	50-53
		Institute Letter	54

All cards were verified by machine to insure accuracy of the data. Whenever an item was left blank by the applicant, the corresponding columns in the punch card were left blank.

After all punching and verifying was completed, all Applicant Record Cards were listed in numerical sequence for reference and checking purposes, and a similar listing of all data was made in alphabetic sequence of applicant's last name, and within last name, by initials and state. During the latter operation a summary card was cut for each applicant, containing all information concerning that individual and the number of times he submitted applications to the respective Institutes.

The individual detail cards and the summary cards were then used to produce tabulations on conventional IBM equipment. All percentages, and ratios of applications to applicants, were computed on an IBM electronic computer.

The resulting summary cards were then listed on multilith masters for reproduction as tables in this publication.

INSTRUCTIONS TO THE APPLICANT: THIS CARD MUST ACCOMPANY EVERY APPLICATION FOR A STIPEND AT AN INSTITUTE SPONSORED BY THE NATIONAL SCIENCE FOUNDATION. IT MUST BE SENT TO THE INSTITUTE DIRECTOR. HE WILL FORWARD IT TO THE FOUNDATION. PLEASE PRINT. DO NOT FOLD, SPINDLE, OR MUTILATE.

SECTION 3

APPLICANTS TO THE NATIONAL SCIENCE FOUNDATION SUMMER INSTITUTES FOR ELEMENTARY SCHOOL PERSONNEL IN 1960

Thirteen of the 15 Institutes in this program submitted Applicant Record Cards to the National Science Foundation. The University of Kansas and De Pauw did not report.

Applications to these 13 Institutes were submitted by 3,911 persons, of whom 29 percent were heads of Mathematics or Science Departments. This proportion of department heads was significantly lower than for Summer Institutes (39 percent) and for Academic Year Institutes (41 percent).

Elementary school personnel constituted 93.4 percent of all applicants, college teachers less than 1 percent, high school teachers 1.6 percent, and all others 4.5 percent.

The average number of applications submitted by elementary teachers was 1.9 per teacher, although the average was slightly lower when all applicants were considered.

DISTRIBUTION BY REGIONS AND STATES

Only 18 percent of all applicants to the Elementary School Institutes came from the Northeast Region of the United States, as compared to 26 percent in the North Central Region, 41 percent in the South, and 16 percent in the West. The locations of the reporting Institutes may be the cause of this variation.

The over-all average number of applications submitted in the United States was 1.8 per person. The rates in the respective regions were: 1.7 in the Northeast, 1.8 in the North Central Region, 1.9 in the South, 2.0 in the West.

Of the individual states, the low was 1.2 in North Dakota and the high was 3.3 in Utah.

Tables 3A present the data on applications and applicants by Region, by Census Division, by State and City. Accompanying 3A tables present the averages (applications per applicant).

DISTRIBUTION BY MAJOR CITY

Less than 8 percent of all applicants were from the 20 major cities which have approximately 16 percent of the total U. S. population.

For major cities the range of applications per person was from 1.0 for San Antonio and San Diego to a high of 2.2 in Baltimore, Maryland.

Among major cities, Boston had no applications to these Institutes, while New York City had 63 applicants, 57 percent of whom were heads of Mathematics or Science Departments.

The accompanying 3A tables show these averages.

DEPARTMENT HEADS

Heads of Mathematics or Science Departments averaged 2.1 applications each while non-department heads averaged 1.8 each. Two-thirds of the applicants from Montana were department heads. A number of states had approximately a 50-50 breakdown between department heads and others. The lowest percentages of department heads was zero in the District of Columbia and 10 percent in Texas.

Tables 3S and 3S % present the data for department heads and non-heads by Region, by Census Division, by State, and by City.

DISTRIBUTION BY SUBJECTS TAUGHT

More than 15 percent of all applicants did not indicate whether they were teachers or what subjects they taught. Exactly 39 percent reported they taught subjects other than mathematics or science. Slightly over 23 percent taught general science, 14 percent mathematics, 6 percent earth science, less than 2 percent each -- biology, chemistry, and physics.

Tables 3B and 3B % present these results by Region, by Census Division, by State, and by City.

DISTRIBUTION BY SUBJECT OF INTEREST

Nearly all applicants indicated one or more subjects of interest. More than one-third were interested in general science, another third in mathematics. The others were: biology, 8 percent; chemistry, 5 percent; earth science, 23 percent; physics, 5 percent.

Tables 3C and 3C % present these data by Region, by Census Division, by State, and by City.

DISTRIBUTION BY NUMBER OF APPLICATIONS SUBMITTED

The distribution of applicants to the Institutes for Elementary School Personnel was determined by number of applications submitted, in the same manner as presented for applicants to the Summer Institutes and the Academic Year Institutes.

Sixty percent of the applicants submitted only one application each; 18 percent submitted two applications each, 10 percent three each, 5 percent four each, 3 percent five each, 2 percent six each.

Nine applicants submitted ten applications each, and two applicants applied to eleven Institutes.

The distribution of applicants by the number of applications submitted is presented in Tables 3D for the individual states by the type of school in which the applicant was teaching.

Since the Institutes are primarily for Elementary School Personnel, practically all of the applicants were in Class 4 (Elementary).

Tables 3D % show the percentages of applicants who submitted the indicated numbers of applications, running from one application each up to eleven applications each.

The only significant data are for Class 4 for each state. Data for other school teachers are not significant because of the small numbers of persons applying.

The distributions for the Elementary School Personnel approximate the distributions determined for applicants to the Summer Institutes and the Academic Year Institutes, being limited only by the fact that there were data only for 13 Institutes.

PERIODS TAUGHT IN MATHEMATICS AND SCIENCE VERSUS NORMAL TEACHING LOAD

A comparison was made of the average number of periods per week taught by the applicants in their respective schools to the normal teaching loads. In most schools a period is one hour or 50 minutes, although some schools have longer periods.

The normal teaching load indicated by all Elementary School Personnel, including Supervisors and Principals, averaged 19.1 periods per week. This was considerably less than the average for applicants to the Summer Institutes and to the Academic Year Institutes, but is biased downward because Supervisors and Principals do not usually teach.

As in the case of these other Institutes, the sums of the periods for mathematics and science do not equal the normal teaching load because Elementary School Personnel are required to teach other courses besides mathematics and science.

Because of the relatively low numbers of applicants to the Elementary Institutes from colleges, junior colleges, and high schools, the results for those schools are not considered significant.

The basic tables indicating the number of teachers by type of school are presented as Tables 3E.

Tables 3E A present the averages for the respective states and the types of schools in which the applicants were teaching.

DISTRIBUTION BY INSTITUTIONS AND INSTITUTES

Tables 3F show the number of teachers who submitted applications to the respective institutes and institutions in the program for Elementary School Personnel, as well as the number of applicants teaching the respective subjects and showing an interest in the respective subjects.

Two universities conducting Institutes for Elementary School Personnel during the Summer of 1960 did not submit the card forms for the applicants to those Institutes. These were the University of Kansas and De Pauw University.

The University of Texas submitted cards for applicants to the Summer Institute in two sections, one of which had an indication "A" while the other was not so indicated. These data were processed mechanically in accordance with that identification and for that reason Table 3F shows two summary lines for the University of Texas, the first without any letter indication and the second with the Institute indication "A". However, there was only one institute conducted at the University of Texas.

Tables 3F % show the percentage distribution of these applicants to the Institutes for Elementary School Personnel.
